ABSTRACT

[0067]   An embodiment of a method for editing image information with a digital camera comprises identifying image information, generating a representation of the image information, magnifying the representation using a discrete magnification step proximal to a midpoint of the digital camera's range for digitally magnifying the image information to produce a modified representation of the image information, presenting the modified representation of the image information, controllably magnifying the modified representation responsive to a magnification control associated with the digital camera, and controllably panning across the modified representation such that preferred subject matter is observable in a desired representation.
